

Yag laser

Manufactured by Wuhan Golden Laser, China.

Most support for the day to day running of the machine can be done by Shapemakers (3848 7371) but if you have any other issues, then contact Golden Laser.

Spare parts for the laser are available from Yan Liang.

This would include the two Xenon lamps and the Yag Crystal (rated at 5000 hours.)

Usually this is a conservative guesstimate.

Typically, the tubes will last up to 1500 hours but if the quality of the cut goes off or you get chiller errors on the blue laser parameter screen, it is most likely to be the tubes.

We have replaced the two xenon tubes on the 30th August 2020 and I have two new replacement tubes on order for you.

Hi Ian,

Please see attached PI. Sorry make you wait a while.

Cheers,

GOLDEN LASER

The Chiller Unit.

The chiller unit water needs to be changed every two - three weeks.

Easy enough to do with drain and refill.

We decant filtered water into a 200 litre container and pour from that into the chiller container. The water level indicator has never been very good so we do a visual inspection to check water height.

Beam alignment is best demonstrated by us and we will instruct when the machine is delivered to your premises. Probably a good idea to video.

Power Supply.

If there are any issues with the power source (2 black boxes located in the operator console) it can be serviced by the manufacturer in China. Packing cases are included in sale.
